UK developer of real-time energy saving mapping system seeks H2020 collaborators	<p>The UK SME has developed a real-time energy mapping system, which combines data collection utilities, back-office database design and implementation, and web-server interface programmes. These combine to provide web-pages with a visual front end to systems dedicated to energy-saving solutions.</p> <p><u>Type of partner sought:</u> The company is looking for either a research partner or an industry partner with a strong research ethos with a desire to join project consortia for a Horizon 2020 project. The partner should be looking to support the energy sector with IT solutions and would be expected to be involved in deploying energy solutions.</p>	none
Brussels-based SME is looking to join a consortium for H2020 call LC-SC3-RES9-2020 on next generation of thin-film photovoltaic technologies	<p>A Brussels SME that offers a flexi thin solar film concept is interested in joining a consortium to develop a project proposal under the H2020 call LC-SC3-RES9-2020 ‘Next generation of thin-film photovoltaic technologies’. Deadline: 11 December 2019. The Brussels SME is specialized in offering EPC (Engineering, Procurement and Construction) services for the installation of flexible thin solar films and is looking to develop a business case and exploitation strategy for this technology.</p> <p><u>Type of partner sought:</u> Research partners that could measure and monitor the financial and environmental impact of thin film devices and partners that are interested in applying the technology on the roofs of their buildings (industrial /heritage) and/or on vehicles (private or public transport operators).</p>	H2020-LC-SC3-RES9-2020
A Brussels SME offering flexible thin-film modules applicable on different surfaces is looking to join a consortium for the H2020 call LC-MG-1-12-2020	<p>A SME based in Brussels offers innovative flexible thin film solar modules that can be installed in locations where other photovoltaic technologies cannot, e.g. rooftops with difficult access, weak and/or temporary structures. It can be installed on vehicles (buses, trains, trucks, etc). They seek to join a consortium for the call LC-MG-1-12-2020 where they could play a role in the Innovation Action subtopic complementing the technologies tested in the living lab. Deadline is 9 January 2020.</p> <p><u>Type of partner sought:</u> Consortiums applying for the topic LC-MG-1-12-2020 ‘Cities as climate-resilient, connected multimodal nodes for smart and clean mobility: new approaches towards demonstrating and testing innovative solutions’ within the subtopic of Innovation Action where their technology could complement the living labs.</p>	H2020-LC-MG-1-12-2020

<p>H2020 - A French organisation offers its expertise and know-how in evaluation and clinical research in ageing, geriatrics and gerontology</p>	<p>The French non-profit organisation has a strong expertise in clinical research and evaluation of health innovations addressed to elderly people, in geriatric institutions as well as at home. The organisation would like to offer its expertise in evaluation of innovations for ageing, geriatrics and gerontology as well as to open its network in Paris region. Research and technical cooperation agreements are sought. Cooperations in Horizon 2020 projects may also be possible.</p> <p><u>Type of partner sought:</u> industry, academy or research organisation. Partner with a health innovation related to ageing addressed to elderly people or professional and non-professional caregivers. The research or technical cooperation will be defined to evaluate, test or experiment such an innovation. Partners could be any project leader with a health innovation related to ageing.</p>	<p>none</p>
<p>URGENT. SC1-BHC-24-2020: hospitals and ethical experts are sought for the design and validation of a novel integrated programme that aims to reduce the readmission levels in cardiology</p>	<p>A Spanish public hospital is looking for partners to submit a proposal to the call SC1-BHC-24-2020: Healthcare interventions for the management of the elderly multimorbid patient. Public hospitals in the field of cardiology, geriatrics or internal medicine, and ethical experts are sought for developing personalised medicine solutions for the elderly within research cooperation agreements. In particular, a specific programme (intervention, self-management and physical therapy) will be implemented.</p> <p><u>Type of partner sought:</u></p> <ul style="list-style-type: none"> •Public hospitals that would like to collaborate in the design and the implementation of a programme that will be based on a specific intervention designed for elderly multimorbid patients affected by CF, and/or a physical therapy and a self-management programme (CDSMP): •Ethical experts in General Data Protection Regulation (GDPL) 	<p>SC1-BHC-24-2020</p>
